

The diagram illustrates the flow of patients through various clinical trial stages and treatment regimens for breast cancer. The x-axis represents the patient state at trial enrolment, categorized into six groups: first-line, first-line + pre-menopausal, post-endo, post-endo + post-CDK46i, post-chemo, and post-endo + post-CDK46i + post-chemo. The y-axis represents the treatment arm or trial stage. The diagram shows the progression of patients from initial treatment to subsequent lines of therapy, including the use of CDK4/6 inhibitors, endocrine therapy, and targeted therapies like PI3Ki and AKTi. Key trials mentioned include MONARCH-3, PALOMA-2, MONALEESA-2, MONALEESA-7, MONARCH-2, MONARCH-4, DESTINY-Breast06, DESTINY-Breast04, CAPitello-291, MONALEESA-3, MONARCH-2, MONARCH-4, TROPICS-01, and OlympiAD.

first-line
+pre-menopausal

post-endo
+post-CDK46i

post-endo
+post-CDK46i
